

OZVOR • \$29

The Get-Cited Kit

Your 30-day plan to get named by ChatGPT, Claude, Perplexity & Gemini

Ozvor

Contents

1. What's inside	
2. 1 • Your AI Visibility Audit	
3. 2 • Your top 3 get-cited fixes	
4. 3 • Three ready-to-publish drafts	
5. 4 • Your 30-day retest plan	
6. Where to go from here	

Your 30-day plan to get named by ChatGPT, Claude, Perplexity and Gemini.

You already know your number — the free AI Visibility Test showed you where AI search stands on your brand today. This is the part that moves it. Everything here is built to be done, not just read: three prioritized fixes, three ready-to-publish drafts, and a 30-day retest plan. Most of it fits in an afternoon.

Do this first (5 minutes). Open your `robots.txt` and confirm you are not blocking `GPTBot` , `ClaudeBot` , `PerplexityBot` or `Google-Extended` . If any are disallowed, the engines literally cannot read your site — nothing else you do here matters until this is fixed. Fix #1 below walks you through it.

What's inside

1. **Your AI Visibility Audit** — your score across the three vectors, and exactly which buyer questions cite you today.
2. **Your top 3 get-cited fixes** — prioritized by impact and effort, so you start where it moves the needle.
3. **Three ready-to-publish drafts** — with the schema markup AI engines read, written for you to review and post.
4. **Your 30-day retest plan** — what to change, when to re-measure, and what "working" looks like.

At the end, the fastest path forward if you'd rather not do it alone.

1 • Your AI Visibility Audit

Your Kit opens with your real audit — the full version of the free test, run across **30 buyer-intent questions** on all five engines (ChatGPT, Claude, Gemini, Perplexity, Google AI Overviews). Here is how to read it.

Your Ozvor AI Visibility Score is one number, built from three vectors:

Vector	What it measures
Visibility	How often — and how highly — AI names you when buyers ask about your category.
Citation Readiness	Whether AI <i>can</i> read and trust your site: crawler access, schema, and the third-party sources it cites.
Execution	The content and authority signals that actually move the first two — the levers you control.

The audit also shows you the exact questions where AI names a competitor instead of you. That list is your roadmap: those are the buyers you are losing to an answer you didn't write.

The honest part: if a brand is new or thinly covered online, the early score is low. That is not a flaw in the measurement — it is the truth you can now act on. Every number in your audit is measured live; when an engine can't be reached, we say so rather than inventing a figure.

2 • Your top 3 get-cited fixes

Prioritized so you start with the highest impact for the least effort.

Fix 1 — Let the AI crawlers in (*effort: low • impact: high*)

If your `robots.txt` blocks the AI crawlers, engines can't read your site, so they can't cite it — no matter how good your content is. Add these lines:

```
`` `User-agent: GPTBot Allow: /
```

```
User-agent: ClaudeBot Allow: /
```

```
User-agent: PerplexityBot Allow: /
```

```
User-agent: Google-Extended Allow: / `` `
```

This is the single most common reason a good business is invisible to AI. It takes five minutes and it unblocks everything else.

Fix 2 — Give AI structured data to read (*effort: medium • impact: high*)

AI engines parse structured data (schema.org) far more reliably than prose. Add three types to your key pages:

- **Organization** on your homepage — who you are, so the engine can treat you as a real entity.
- **FAQPage** on pages that answer buyer questions — this is the format AI Overviews pull from most.
- **Article** on your blog posts — so your content is machine-readable, not just human-readable.

You don't need a developer for the basics: most site builders have a schema field or plugin, and your three drafts below already include the markup.

Fix 3 — Show up where AI already looks (*effort: medium • impact: high*)

AI engines cite third-party sources constantly — and the same few come up again and again: **Reddit, LinkedIn, and review sites like G2**. If your business is absent there, you are absent from a large share of the answers. Start with one genuine, helpful presence on the platform your buyers actually use. You don't need all three this month; you need to stop being invisible on the one that matters most.

3 • Three ready-to-publish drafts

Each draft is written to close one of the fixes above and to be the kind of content AI cites: a clear question, a direct answer, and the structured markup engines read. Review, adjust to your voice, and publish.

Draft A — A blog post that answers a buyer question

Format: a "how does X work / which is best for Y" post — the exact shape of question AI engines get asked and pull answers from.

Structure to follow:

- **Title:** phrase it as the question a buyer would type ("How do I choose a [your category] for [their situation]?").
- **Overview:** two or three sentences that frame the problem plainly.
- **The answer:** your genuine, specific take — the more concrete, the more citable.
- **Why it matters:** one data point or example that makes it credible.
- **Add FAQPage schema** with the question and your answer.

Draft B — A comparison page

Format: an honest "[you] vs [alternative]" page. Buyers ask AI to compare options constantly; if you don't publish the comparison, someone else's version is what AI repeats.

Structure to follow:

- A short, fair table of the real differences.
- One paragraph on who each option is genuinely best for — including where you're *not* the answer. That honesty is what makes the page trustworthy enough to cite.
- **Add Article + FAQPage schema.**

Draft C — A LinkedIn post that builds your authority signal

Format: a proof-of-work post that links back to the content above. This is how you start showing up on the third-party sources from Fix 3.

Structure to follow:

- Open with the specific problem your buyer has.
- Share one real insight or result — concrete beats clever.
- Link to your new page. Consistency here compounds: it is the flywheel behind Citation Readiness.

(When you generate drafts inside the Ozvor platform on the Growth plan, these come back as full, publish-ready text in your brand voice — the templates above are the starting structure.)

4 • Your 30-day retest plan

Improvement in AI search is not instant and it is not linear. Here is the rhythm that works.

Week	Do this	Then
Week 1	Ship Fix 1 (crawlers) and publish Draft A.	The fastest wins — crawler access unblocks everything.
Week 2	Add schema (Fix 2) to your key pages; publish Draft B.	Citation Readiness starts to move first — engines can now read you.
Week 3	Start Fix 3 — one genuine presence on Reddit, LinkedIn or a review site. Publish Draft C.	Off-site authority is slower but it's the biggest long-term lever.
Week 4	Re-run your audit and compare, question by question.	Some weeks show little movement, then a jump. Patience is part of the method.

What "working" looks like: more of your buyer questions naming you, and Citation Readiness climbing first (it responds fastest to the technical fixes). Track it — what you don't measure, you can't improve.

Where to go from here

You have everything you need to move your score by hand. Here is the ladder if you want it to move faster, or to stop doing it manually.

- **Free AI Visibility Test** — re-run it any time to see where you stand today. (ozvor.com/test)
- **The Get-Cited Kit — \$29** — this playbook, generated for your brand with your real audit and your drafts. (*you're reading it*)
- **Growth — \$99/mo** — weekly re-audits and alerts across all five engines, plus publish-ready content drafts generated in your brand voice. The Kit is a snapshot; Growth keeps it moving. (ozvor.com/pricing)
- **Agency — \$249/mo** — the same, white-label, for up to 25 client brands. (ozvor.com/agencies)
- **OrganicPosts by Ozvor** — if you'd rather not do it yourself, our team executes the whole plan for you: content, cadence, and monitoring. (ozvor.com/organicposts)

The next step is the smallest one: open your `robots.txt`, check for those four crawlers, and publish Draft A this week. That alone puts you ahead of most of your category.

Get cited. Get chosen.
